

# TWIN spacer

Thermal insulation assembly  
using the air gap system

Many Fire Services have tested and selected TWIN SPACER® fabrics in particular the French Civil Defence and the Fire Services of Paris, Marseille, Lyon, United Kingdom Ministry of Defence, West Yorkshire, Northern Ireland, North East Fire Consortium, Tokyo, Madrid...

**APPLICATION: TWIN SPACER® can also be used for other purposes such as industry as it protects efficiently against heat risks, electric arc, ...**

A fireman jacket lining made of TWIN SPACER® in association with an appropriate outer fabric and breathable waterproofing system provides:

**OPTIMUM PROTECTION:** meets EN 469 in flashover conditions (e.g. extreme temperatures).

**INCREASED SAFETY:** reduces thermal stress thanks to a good understanding of the exterior environment in normal working conditions (low heat flux).

**WEARER COMFORT:** lightweight jackets 1 to 1.5 kg, great flexibility, easy to put on.

→ Lining also available in viscose filament for more comfort thanks to its slippery properties.

**EASY CARE:** quick to dry, no change on look (no holes or pilling).
